

NOTE:

1. Slight color variations are common between individual mixes and batches due to differences in chemical composition, application thickness & finishing techniques as well as environmental condition variations
2. Epoxy products are not U.V. Stable, even with the addition U.V. Absorbers and / or U.V. stabilizer additives such as Smith's Epoxy U.V. Absorber. Expect epoxy systems to darken or amber faster with exposure to light, either artificial or natural
3. Site mock-ups are highly recommended and will best represent actual color
